Extended Heater And Power Controller Life With Variable Time Base

With variable time base control, the power controller automatically adjusts the time base and output power with respect to process input. Accelerated life testing verified that variable time base control significantly reduces expansion and contraction of the heater element. This extends heater and power controller life while improving process temperature control. You save money on heaters, downtime and maintenance.

Loop Powered or Transformer Powered

Loop Powered

By using a temperature control 4-20mA process output signal as the power supply for the DIN-A-MITE input the cost of the power control can be reduced. With zero cross (burst fired) the 4-20mA input signal simultaneously performs the tasks of providing a power supply and an input command signal. The DIN-A-MITE "F0" input control signal is a loop powered option and will work as single- or three-phase. It works only with a 4-20mA input.

Transformer Powered

Some DIN-A-MITE models require that an on-board power supply be used to power the internal electronics. Phase angle options require that we detect the zero cross of the ac sine wave and thus a transformer is required also. The DIN-A-MITE input control signal types "L", "P" and "S" are transformer powered and can be controlled manually (open loop) with a potentiometer input or in the auto mode (close loop) with a temperature control using any of the 4-20mA, linear voltage (0-5,1-5 and 0-10V⎓(dc)) input types.

Loop Powered 4-20mA Variable Time Base

Models: DC_ _-[02, 24, 60] [F0]-_ _ _ _

20% Power Output

3~ cycles on, 12~ cycles off

50% Power Output

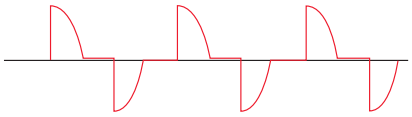
3~ cycles on, 3~ cycles off

80% Power Output

12~ cycles on, 3~ cycles off

Phase Angle

Models: DC1_ -_ _ [L, P] 0 - 0_ _ _

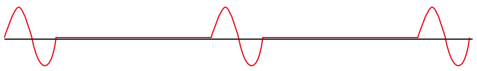


Phase angle (input control type "P") phase control is infinitely variable inside the sine wave. This provides a variable voltage and/or current output. This option includes soft start and line voltage compensation. This is transformer powered and therefore will work with a linear voltage, current input or a potentiometer input. This is single-phase only.

Single Cycle Variable Time Base

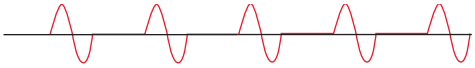
Models: DC_ _-_ _ S_ -_ _ _ _

25% Power Output



1~ line cycle on, 3 ~ cycles off

50% Power Output



1~ line cycle on, 1 ~ cycle off

With single-cycle variable time base (VTBS) control, at 50% power, power is on one cycle and off one cycle. At 25%, it is on for one cycle and off for three. Under 50%, the unit is not on for more than one consecutive cycle. Over 50%, the unit is not off for more than one consecutive cycle. This model will work with a linear voltage input, a 4 to 20mA input or a potentiometer input.

SCR Power Controller Delivers Up To 100 Amps in a Smart Package

The Watlow® DIN-A-MITE® Style D Silicon Controlled Rectifier (SCR) power controller provides you with an inexpensive, versatile product for controlling heat in an efficient package. You also get all the quality you expect from a Watlow designed and manufactured product. The standard back panel mounting footprint is equal to that of an industry standard mercury displacement relay. There is no need to worry about mercury, the DIN-A-MITE controller is mercury free.

The DIN-A-MITE Style D is capable of zero cross switching up to 100 amps single-phase, at 600V~(ac) at 86°F (30°C), depending on the model selected. Combined with the input of two or three controllers and you can control three-phase. It is totally touch-safe and includes standard back panel mounting, on-board semiconductor fuses (accessible from the front) and a current transformer option for external load current monitoring. An optional "shorted SCR detector" feature is available on some models. This model is UL® 508 and C-UL® and CE approved. These agency approvals are ideal for those panel builders that require agency approvals on their panels and cabinets.

Variable time base, 4-20mA process control, or V≂(ac/dc) input contactor options are available. All configurations are model number dependent and factory selectable. This power controller also includes 200KA short circuit current rating (SCCR) tested up to 480V~(ac) to prevent arch flash with required fusing.

The DIN-A-MITE Style D power controller is made in the United States.
