# FG-3000 Digital Force Gauge

# Nidec

# **Operation Manual**

Operators should wear protection such as a mask and gloves in case pieces or components break away from the unit under test.

Whether the unit is ON or OFF, DO NOT exceed the capacity of the gauge. NEVER exceed 150% of the rated capacity, or the load cell will be damaged. At 110% of the rated capacity, the display will flash a warning.

When mounting FG-3000 Series Digital Force Gauges, use M4 mounting screws with a maximum insertion depth of 7 mm into the gauge. Hand tighten mounting screws, DO NOT use tools. Do not use damaged clamp.

Measure in line tension and compression forces only. DO NOT attempt to measure forces at an angle to the measuring shaft – damage to load cell and/or shaft may result.

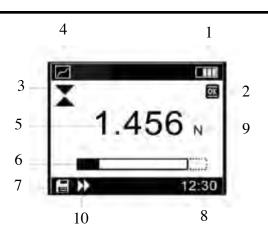

Do not attempt to repair or alter this instrument. Warranty will be voided and damage to the unit may result.

Use and store within the stated temperature and humidity ranges, or damage and failure may result.

When using adapter measuring heads, do not use tools. Hand tighten only.

The new FG-3000 Series digital force gauges are the choice for simple, cost-effective tension and compression testing. Combining one of the most compact housings, yet maintaining a large back-lit LCD, these units were designed to fit perfectly in the hand for ease of use. The multi-language FG-3000's provide menu programming for intuitive set-up of the instrument to your desired requirements. Three modes of operation are selectable: Track mode displays live readings, Peak mode records the maximum reading sensed during the test, and Pre-set mode which activates user defined high and low limit set points. The programmable limits provide a quick visual and audible indication if a test passes or fails. In addition, a comparator output enables integration of the instrument into your quality system for repetitive testing such as on production lines.

The display graphics facilitate user comprehension and operation. An analog bar graph provides perspective of current reading in comparison to the full scale range. Pass/Fail icons provide an instant response of the testing outcome while a storage symbol acknowledges when a reading is logged. A menu-selectable display orientation streamlines switching from push to pull testing for portable or test stand applications.

#### 2. PREPARATION

#### 2.1 Confirm the model

This series force gauge has 5 ranges available, each model corresponding to the capacity and resolution shown on the last page of this manual. Select the appropriate model you need before use.

#### 2.2 Choose the adapter

To fit your application, this series force gauge is equipped with a variety of measuring head adapters. Select the appropriate measuring adapter prior to testing.

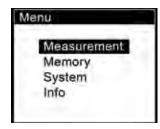

To mount the measuring adapter, install the adapter on the gauge's measurement shaft. Tighten by hand. Do not tighten with any tool.

NOTE: Do not use tools to tighten the adapter to the gauge shaft. Damage to the force gauge will occur.

#### 3. SETUP

#### 3.1 Measurement

The Measurement menu contains the Unit of measure and Measurement Mode sub-menus, as shown in Fig. 3-1.

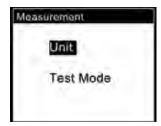

Fig. 3-1

#### 3.2 Select Units

The measuring units can be selected under this menu. Different range models may have different unit selection capabilities. Touch "ZERO" or "MODE" keys to shift to the next selection. Press "LOG" to cancel or touch "MENU" to confirm and exit. (Fig. 3-2)

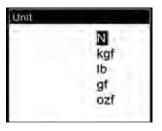

Fig. 3-2

#### 3.3 Select Test Mode

The FG-3000 has 3 types of Test Modes.

**Track:** The real time measuring mode. Under this mode, press the ZERO key to tare any initial reading being displayed.

**Peak:** In Peak mode, the maximum force will be recorded and displayed. Press the ZERO key to reset the peak value.

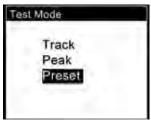

**Preset:** Enables the setting of an upper and lower limit to compare to the measured force value. A simple GO/NG analysis is displayed on screen via icon indicators for quick pass/fail testing. To guarantee an accurate test, make sure to zero the display and tare any small force being displayed before beginning the test.

There are two means to select your appropriate Test Mode. At the home screen simply press the MODE key to scroll through the three measuring modes.

You can also select the mode under the Measurement menu in the Test Mode sub-menu. See Fig. 3-3(a)

If the Preset is selected, a new screen will pop up where you can set the Upper and Lower limits. See Fig 3-3(b)

Press ZERO to adjust the number and press MODE to move to the next digit.

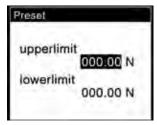

Fig. 3-3(a)

#### Note:

- 1) The upper limit can not exceed 110% capacity of the force gauge.
- 2) The lower limit must not be less than 10% of capacity.
- 3) The upper limit must exceed the lower limit

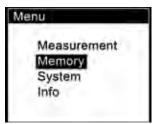

#### 4. SAVING THE MEASURED VALUE

Measured results can be stored in the force gauge's memory. You can review or print the stored data at a later time.

At the home screen press the LOG key to store a value. The storage icon will be displayed.

The data stored is the current displayed force value in Track and Preset modes. In Peak mode it is the peak value shown on the display.

#### 4.1 Memory

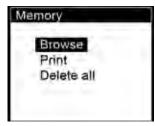

Fig. 4-1

Memory menu contains three submenus: Browse, Print, Delete all, as shown in Fig. 4-1.

You can browse stored data or print all the data via the FG-PRINT mini-printer (sold separately). You may also delete all the records in the Delete all sub-menu.

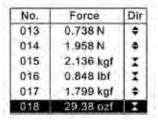

#### 4.2 Browse

In the Browse sub-menu. The data in memory can be reviewed in the order saved which is oldest to newest. See Fig. 4-2(a)

Press ZERO/UP or MODE/DOWN to scroll.

Press MENU. A small window will pop out. Here you can select Delete or Print. See Fig. 4-2(b).

#### 5.6 Calibration

Because of the sensor material performance or the influence of external factors, there may be errors of a certain level after a period of usage.

It is recommended to send the force gauge to a specialized testing organization for calibration.

If you have standard force weights or other standard load and a test stand, you may utilize this function and procedure to calbrate the sensor.

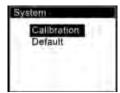

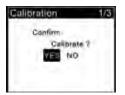

Fig. 5-6(a)

- 1) Mount the force gauge.
- 2) Use the tare by use of the ZERO key.
- 3) Enter Calibration sub-menu as in Fig. 5-6(a).

The calibration interface is shown in Fig. 5-6(b).

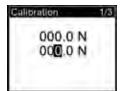

Fig. 5-6(b)

4) Load a standard force. Now the value in the standard input area is just equal to the current measured value. Wait a moment for the force to stabilize.

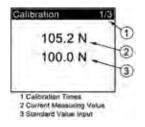

Fig. 5-6(c)

- 5) Press ZERO and MODE to input the standard force value.
- 6) Press MENU to enter the next calibration. Press LOG to interrupt the calibration.

When 3 calibration points have been finished, a confirm window will pop up asking to "Save and Exit" (YES)/(NO). Fig. 5-6(d)

Press ZERO or MODE to select, then press MENU.

If "YES" is selected, Calibration is complete. Fig. 5-6(e)
