DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITH TARE

The Tare function can improve measurement uncertainties on two modules with the same full scale pressure range installed into one nVision Reference Recorder. Requires the use of an equalizing valve.

The following specifications apply to the measurement system with a logging interval of 1 second/reading:

Full Scale Range of Both Sensors	The Greater of (+/-)								
psi	psi	mbar	inH₂O	mmH₂O		% of DP Reading			
30	0.0005	0.04	0.014	0.4	or	0.025%			
100	0.0015	0.10	0.04	1.0	or	0.025%			
300	0.005	0.4	0.14	4.0	or	0.025%			
1000	0.02	1.0	0.4	10.0	or	0.05%			
3000	0.05	4.0	1.4	n/a	or	0.05%

15000	0.3	15.0	6.0	n/a	or	0.05%			

Unit must be enabled in CrystalControl

DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITHOUT TARE

The total nVision Reference Calibrator measurement uncertainty in the ΔP mode configuration will need to consider the uncertainties of both pressure modules. We recommend the module uncertainties to be combined with the preferred square root of the sum of the squares (or "root sum squares") method.

The following table lists the possible combinations of using Pressure Modules (PM) with different accuracy statements. The uncertainties reported below are without the use of the Tare feature, which will greatly improve your measurement uncertainty.

	SENSORS, TEST & CALIBRATIC	SORS, TEST & CALIBRATION			
		Upper Pressure Mode (of Static Line Pressure

Lower Pressure Module Uncertainties	0.025%	0.035%	0.056%

Temperature Module (RTD100)

Calibrated for Pt100 RTD/PRT (100 Ohms at 0°C Platinum Resistance Temperature Detector) sensors conforming to DIN/ IEC 60751 (or IEC751) with US, Euro, or Lab calibration curves. An RTD is not included, but each RTD100 includes P/N 3953 RTD Connection Kit.

TEMPERATURE MEASUREMENT

Resistance Input

Range: 0 – 400 Ohms range for use with 100 Ohm PRTs

repeatability, temperature, and stability for one year.

Includes all effects of linearity, hysteresis,

Resolution: 0.01 on all scales

Units: °C, K, °F, R, Ω

TCRs: 0.003850 $\Omega/\Omega/^{\circ}C$ (IEC 60751), 0.003911 $\Omega/\Omega/^{\circ}C$

(US Industrial Std), 0.003926 $\Omega/\Omega/^{\circ}C$

Wiring: 2-, 3-, 4-wire support

Connection: M8 connector cable or terminal block

The proper selection of the RTD sensing element is very important as the error associated with this device is the majority of the overall system measurement uncertainty. IEC 751 is the standard that defines the temperature versus resistance for 100Ω , $0.00385~\Omega/\Omega/^{\circ}C$ platinum RTDs. IEC 751 defines two classes of RTDs: Class A and B. Class A RTDs operate over the $-200~to~630^{\circ}C$ range versus $-200~to~630^{\circ}C$ rothe Class B elements. For example, the Class A uncertainty is about half that of the Class B elements as illustrated in the following table.

SPECIAL FEATURES

The following requires the use of our free **CrystalControl** software

Averaging Screen: Averages all points in a recording run. Data Point Counter: Screen for counting the data points logged. Display Screens: Turn on and rearrange display screens.

Estimated Recording Time: A CrystalControl calculation based on active screens and logging interval.

Live PC Graph: During a recording, graph directly to your PC.

Password Protect: Changes to configuration or userspan calibration factor(s). Pressure Switch Test: Using a PM and MA20, get deadband and state-change pressure.

Run Tags: Create and enable run tags that will identify logging runs.

Screen Numbers: Number each display screen to make writing procedures around the nVision easier.

Secure Documents: Download into secure pdf documents for tamper proof records.

Start-up Screen: Define a 32-character prompt which requires user acknowledgement at startup.

User Defined Unit: Define and display any pressure units not included, or to use the gauge to display force,
