**DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITH TARE**

The Tare function can improve measurement uncertainties on two modules with the same full scale pressure range installed into one nVision Reference Recorder. Requires the use of an equalizing valve.

The following specifications apply to the measurement system with a logging interval of 1 second/reading:

| Full Scale Range of Both Sensors | The Greater of (+/-) |      |                    |                    | or | % of DP Reading |

**DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITHOUT TARE**

The total nVision Reference Calibrator measurement uncertainty in the ΔP mode configuration will need to consider the uncertainties of both pressure modules. We recommend the module uncertainties to be combined with the preferred square root of the sum of the squares (or "root sum squares") method.

The following table lists the possible combinations of using Pressure Modules (PM) with different accuracy statements. The uncertainties reported below are without the use of the Tare feature, which will greatly improve your measurement uncertainty.

| Lower Pressure Module Uncertainties (of Static Line Pressure) (of Reading) |        | Upper Pressure Module Uncertainties (of Static Line Pressure) (of Reading) |        |
|--|--------|--|--------|
|  |        | 0.025%   | 0.05%  |
| 0.025%   | 0.025% | 0.035%   | 0.056% |
|  | 0.05%  | 0.056%   | 0.071% |

**Temperature Module (RTD100)**

Calibrated for Pt100 RTD/PRT (100 Ohms at 0°C Platinum Resistance Temperature Detector) sensors conforming to DIN/IEC 60751 (or IEC751) with US, Euro, or Lab calibration curves. An RTD is not included, but each RTD100 includes P/N 3953 RTD Connection Kit.

**TEMPERATURE MEASUREMENT**

**Resistance Input**

Accuracy:  $\pm (0.015\% \text{ of rdg} + 0.02 \Omega)$

Range: **0 – 400 Ohms range for use with 100 Ohm PRTs**

Resolution: **0.01 on all scales**

Units: **°C, K, °F, R,  $\Omega$**

TCRs: **0.003850  $\Omega/\Omega/^\circ\text{C}$  (IEC 60751), 0.003911  $\Omega/\Omega/^\circ\text{C}$  (US Industrial Std), 0.003926  $\Omega/\Omega/^\circ\text{C}$**

Wiring: **2-, 3-, 4-wire support**

Connection: **M8 connector cable or terminal block**

*Includes all effects of linearity, hysteresis, repeatability, temperature, and stability for one year.*

The proper selection of the RTD sensing element is very important as the error associated with this device is the majority of the overall system measurement uncertainty. IEC 751 is the standard that defines the temperature versus resistance for 100 $\Omega$ , 0.00385  $\Omega/\Omega/^\circ\text{C}$  platinum RTDs. IEC 751 defines two classes of RTDs: Class A and B. Class A RTDs operate over the -200 to 630°C range versus -200 to 800°C for the Class B elements. For example, the Class A uncertainty is about half that of the Class B elements as illustrated in the following table.

| Temperature<br>°C | nVision<br>Uncertainty |                     | Class A                |                     |                                  |                     | Class B                |                     |                                  |                     |

NV-4AA-30PSI-3KPSI-BARO . . . . . nVision with 30 psi pressure module (upper) and 3000 psi pressure module (lower) and a BARO module option.

NV-4AA-RTD100-10KPSI-GWX-W . . . . . nVision with RTD100 temperature module (upper) and 10 000 psi pressure module (lower); a System G pump system; and a waterproof carrying case.

AMETEK offers a variety of solutions for pressure generation and measurement. Our line of products for pressure generation includes everything from small pneumatic hand pumps to a precision, hydraulic pressure comparator capable of generating up to 15 000 psi / 1000 bar / 100 MPa.

All of our pumps may be ordered as part of a Pump System, complete with an nVision and delivered in a sturdy carrying case with custom insert.

\* Refer to the following page for a more detailed description of each pump system.

~ The Waterproof Case is an option for Systems A, B, and C only.  
The Waterproof Case is the only option for Systems G and H.

**► Ordering a Pump System Only**

Any pump system, carrying case, and connection fittings for an nVision reference recorder may be ordered separately from the gauge. Enter NV-NONE followed by the Pump System part number and the Carrying Case option code.

**DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITH TARE**

The Tare function can improve measurement uncertainties on two modules with the same full scale pressure range installed into one nVision Reference Recorder. Requires the use of an equalizing valve.

The following specifications apply to the measurement system with a logging interval of 1 second/reading:

**DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITHOUT TARE**

The total nVision Reference Calibrator measurement uncertainty in the ΔP mode configuration will need to consider the uncertainties of both pressure modules. We recommend the module uncertainties to be combined with the preferred square root of the sum of the squares (or "root sum squares") method.

The following table lists the possible combinations of using Pressure Modules (PM) with different accuracy statements. The uncertainties reported below are without the use of the Tare feature, which will greatly improve your measurement uncertainty.

| Lower Pressure Module Uncertainties<br>(of Static Line Pressure)<br>(of Reading) |        | Upper Pressure Module Uncertainties<br>(of Static Line Pressure) (of Reading) |        |

The MA20 Module has these specific input entity parameters:

- Ui = 28 V**
- li = 93.3 mA**
- Pi = 653.3 mW**
- Ci = 0.36 uF**
- Li = 39.1 uH**
- Uo = 6.6 V**

**Temperature Module (RTD100)**

Calibrated for Pt100 RTD/PRT (100 Ohms at 0°C Platinum Resistance Temperature Detector) sensors conforming to DIN/IEC 60751 (or IEC751) with US, Euro, or Lab calibration curves. An RTD is not included, but each RTD100 includes P/N 3953 RTD Connection Kit.

**TEMPERATURE MEASUREMENT**

**Resistance Input**

Accuracy:  $\pm (0.015\% \text{ of rdg} + 0.02 \Omega)$

Range: **0 – 400 Ohms range for use with 100 Ohm PRTs**

Resolution: **0.01 on all scales**

Units: **°C, K, °F, R,  $\Omega$**

TCRs: **0.003850  $\Omega/\Omega/^\circ\text{C}$  (IEC 60751), 0.003911  $\Omega/\Omega/^\circ\text{C}$  (US Industrial Std), 0.003926  $\Omega/\Omega/^\circ\text{C}$**

Wiring: **2-, 3-, 4-wire support**

Connection: **M8 connector cable or terminal block**

*Includes all effects of linearity, hysteresis, repeatability, temperature, and stability for one year.*

The proper selection of the RTD sensing element is very important as the error associated with this device is the majority of the overall system measurement uncertainty. IEC 751 is the standard that defines the temperature versus resistance for 100 $\Omega$ , 0.00385  $\Omega/\Omega/^\circ\text{C}$  platinum RTDs. IEC 751 defines two classes of RTDs: Class A and B. Class A RTDs operate over the -200 to 630°C range versus -200 to 800°C for the Class B elements. For example, the Class A uncertainty is about half that of the Class B elements as illustrated in the following table.

| Temperature<br>°C | nVision<br>Uncertainty |                     | Class A                |                     |                                  |                     | Class B                |                     |                                  |                     |

AMETEK offers a variety of solutions for pressure generation and measurement. Our line of products for pressure generation includes everything from small pneumatic hand pumps to a precision, hydraulic pressure comparator capable of generating up to 15 000 psi / 1000 bar / 100 MPa.

All of our pumps may be ordered as part of a Pump System, complete with an nVision and delivered in a sturdy carrying case with custom insert.

\* Refer to the following page for a more detailed description of each pump system.

**► Ordering a Pump System Only**

Any pump system, carrying case, and connection fittings for an nVision reference recorder may be ordered separately from the gauge. Enter NV-NONE followed by the Pump System part number and the Carrying Case option code.

**DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITH TARE**

The Tare function can improve measurement uncertainties on two modules with the same full scale pressure range installed into one nVision Reference Recorder. Requires the use of an equalizing valve.

The following specifications apply to the measurement system with a logging interval of 1 second/reading:

| Full Scale Range of Both Sensors<br>kg/cm <sup>2</sup> | The Greater of (+/-) |        |                    |                    | or | % of DP Reading |

**DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITHOUT TARE**

The total nVision Reference Calibrator measurement uncertainty in the ΔP mode configuration will need to consider the uncertainties of both pressure modules. We recommend the module uncertainties to be combined with the preferred square root of the sum of the squares (or "root sum squares") method.

The following table lists the possible combinations of using Pressure Modules (PM) with different accuracy statements. The uncertainties reported below are without the use of the Tare feature, which will greatly improve your measurement uncertainty.

| Lower Pressure Module Uncertainties<br>(of Static Line Pressure)<br>(of Reading) |        | Upper Pressure Module Uncertainties<br>(of Static Line Pressure) (of Reading) |       |

Units: **°C, K, °F, R,  $\Omega$**

TCRs: **0.003850  $\Omega/\Omega/^\circ\text{C}$  (IEC 60751), 0.003911  $\Omega/\Omega/^\circ\text{C}$  (US Industrial Std), 0.003926  $\Omega/\Omega/^\circ\text{C}$**

Wiring: **2-, 3-, 4-wire support**

Connection: **M8 connector cable or terminal block**

*Includes all effects of linearity, hysteresis, repeatability, temperature, and stability for one year.*

The proper selection of the RTD sensing element is very important as the error associated with this device is the majority of the overall system measurement uncertainty. IEC 751 is the standard that defines the temperature versus resistance for 100 $\Omega$ , 0.00385  $\Omega/\Omega/^\circ\text{C}$  platinum RTDs. IEC 751 defines two classes of RTDs: Class A and B. Class A RTDs operate over the -200 to 630°C range versus -200 to 800°C for the Class B elements. For example, the Class A uncertainty is about half that of the Class B elements as illustrated in the following table.

| Temperature<br>°C | nVision<br>Uncertainty |                     | Class A                          |                     |                        |                     | Class B                          |                     |             |                     |

**ATEX IEC IECEx ATEX and IECEx Scheme Entity Parameters**

The RTD100 Module has these specific input entity parameters:

- Ui = 0 V**
- li = 0 A**
- Pi = 0 W**
- Uo = 9.73 V**
- Io = 1.6642 A**
- Po = 1.1 W**
- Co = 0.5 uF**
- Lo = 12 uH\***

**nVision Chassis (NV)**

**OPERATING TEMPERATURE**

Temperature Range: **-20 to 50° C (-4 to 122° F)**

< 95% RH, non-condensing. No change in accuracy over operating temperature range. Gauge must be zeroed to achieve rated specification.

Applies to all modules.

**DISPLAY**

Screen: **255 x 160 pixel graphical display**

LCD readable in sunlight with bright backlight.

Display Rate: **4 readings/second (standard)**

**up to 10 readings/second (recording)**

**POWER**

The nVision is Intrinsicly Safe only if powered by one of the following battery types.

**DATA/COMMUNICATION**

Digital Interface: **mini-USB**

*The mini USB will power the nVision with or without the battery pack installed.*

*For hazardous location product warnings, refer to the operation manual.*

**DATALOGGING**

Capacity: **Approx. 1,000,000 data points\***

*\*Single Module Recording*

Storage Type: **Non-volatile flash memory**

*Limit of 64 individual recordings.*

Fastest Interval: **10 per second**

*The included CrystalControl software is compatible with Vista (SP 2), Windows 7 (SP 1), Windows 8.1 and Windows 10.*

Slowest Interval: **1 per hour**

*Produces csv, xls, pdf, or signed pdf files, and uses Excel template files (samples included) to automatically format and graph data.*

**ENCLOSURE**

Weight: **680 g (24.0 oz)**

*Weight includes one pressure module, one RTD module, 4AA battery module, and protective boot.*

Rating: **IP66 and IP67**

*Submersible to 1 m for 30 minutes [IEC 60529].*

Housing: **Impact resistant injection molded**

*LCD protected from impact damage by 1.5 mm (0.06") thick polycarbonate lens.*

Keypad and Labels: **UV Resistant Polyester**

Mounting: **M4 x 0.7 [8 mm (0.31")]** deep

*Skydrol® compatible.*

**threaded insert mounting locations**

*For hazardous location product warnings, refer to the operation manual.*

### STORAGE TEMPERATURE

Temperature Range: **-40 to 75° C (-40 to 167° F)**

*Batteries should be removed if stored for more than one month.*

### SPECIAL FEATURES

The following requires the use of our free [CrystalControl](#) software

Averaging Screen: **Averages all points in a recording run.**

Data Point Counter: **Screen for counting the data points logged.**

Display Screens: **Turn on and rearrange display screens.**

Estimated Recording Time: **A CrystalControl calculation based on active screens and logging interval.**

Live PC Graph: **During a recording, graph directly to your PC.**

Password Protect: **Changes to configuration or userspan calibration factor(s).**

Pressure Switch Test: **Using a PM and MA20, get deadband and state-change pressure.**

Remove: **Unwanted pressure units.**

Run Tags: **Create and enable run tags that will identify logging runs.**

Screen Numbers: **Number each display screen to make writing procedures around the nVision easier.**

Secure Documents: **Download into secure pdf documents for tamper proof records.**

Start-up Screen: **Define a 32-character prompt which requires user acknowledgement at startup.**

User Defined Unit: **Define and display any pressure units not included, or to use the gauge to display force, level or other pressure related parameters.**

### STANDARD DELIVERY

AMETEK offers a variety of solutions for pressure generation and measurement. Our line of products for pressure generation includes everything from small pneumatic hand pumps to a precision, hydraulic pressure comparator capable of generating up to 15 000 psi / 1000 bar / 100 MPa.

All of our pumps may be ordered as part of a Pump System, complete with an nVision and delivered in a sturdy carrying case with custom insert.

\* Refer to the following page for a more detailed description of each pump system.

~ The Waterproof Case is an option for Systems A, B, and C only.  
The Waterproof Case is the only option for Systems G and H.

**► Ordering a Pump System Only**

Any pump system, carrying case, and connection fittings for an nVision reference recorder may be ordered separately from the gauge. Enter NV-NONE followed by the Pump System part number and the Carrying Case option code.

**DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITH TARE**

The Tare function can improve measurement uncertainties on two modules with the same full scale pressure range installed into one nVision Reference Recorder. Requires the use of an equalizing valve.

The following specifications apply to the measurement system with a logging interval of 1 second/reading:

| Full Scale Range of Both Sensors | The Greater of (+/-) |        |                    |                    | or | % of DP Reading |

**DIFFERENTIAL PRESSURE MEASUREMENT UNCERTAINTIES WITHOUT TARE**

The total nVision Reference Calibrator measurement uncertainty in the ΔP mode configuration will need to consider the uncertainties of both pressure modules. We recommend the module uncertainties to be combined with the preferred square root of the sum of the squares (or “root sum squares”) method.

The following table lists the possible combinations of using Pressure Modules (PM) with different accuracy statements. The uncertainties reported below are without the use of the Tare feature, which will greatly improve your measurement uncertainty.

| Lower Pressure Module Uncertainties (of Static Line Pressure) (of Reading) |        | Upper Pressure Module Uncertainties (of Static Line Pressure) (of Reading) |        |
|--|--------|--|--------|
|  |        | 0.025%   | 0.05%  |
| 0.025%   | 0.035% | 0.056%   | 0.071% |

Units: **°C, K, °F, R,  $\Omega$**

TCRs: **0.003850  $\Omega/\Omega/^\circ\text{C}$  (IEC 60751), 0.003911  $\Omega/\Omega/^\circ\text{C}$  (US Industrial Std), 0.003926  $\Omega/\Omega/^\circ\text{C}$**

Wiring: **2-, 3-, 4-wire support**

Connection: **M8 connector cable or terminal block**

*Includes all effects of linearity, hysteresis, repeatability, temperature, and stability for one year.*

The proper selection of the RTD sensing element is very important as the error associated with this device is the majority of the overall system measurement uncertainty. IEC 751 is the standard that defines the temperature versus resistance for 100 $\Omega$ , 0.00385  $\Omega/\Omega/^\circ\text{C}$  platinum RTDs. IEC 751 defines two classes of RTDs: Class A and B. Class A RTDs operate over the -200 to 630°C range versus -200 to 800°C for the Class B elements. For example, the Class A uncertainty is about half that of the Class B elements as illustrated in the following table.

| Temperature<br>°C | nVision<br>Uncertainty           |                     | Class A                |                     |                                  |                     | Class B                |                     |                                  |                     |

**ATEX IEC IECEx ATEX and IECEx Scheme Entity Parameters**

The RTD100 Module has these specific input entity parameters:

- Ui = 0 V**
- li = 0 A**
- Pi = 0 W**
- Uo = 9.73 V**
- Io = 1.6642 A**
- Po = 1.1 W**
- Co = 0.5 uF**
- Lo = 12 uH\***

**nVision Chassis (NV)**

**OPERATING TEMPERATURE**

Temperature Range: **-20 to 50° C (-4 to 122° F)**

< 95% RH, non-condensing. No change in accuracy over operating temperature range. Gauge must be zeroed to achieve rated specification.

Applies to all modules.

**DISPLAY**

Screen: **255 x 160 pixel graphical display**

LCD readable in sunlight with bright backlight.

Display Rate: **4 readings/second (standard)**

**up to 10 readings/second (recording)**

**POWER**

The nVision is Intrinsically Safe only if powered by one of the following battery types.

Ultra Low Power: **Up to 60 days, typical\***

\*2 installed modules, 1 reading per 5 minute recording interval, and 23° C ambient temperature.

Uses 4 alkaline AA (LR6) batteries. Use of backlight reduces operating time.

For hazardous location product warnings, refer to the operation manual.

**DATA/COMMUNICATION**

Digital Interface: **mini-USB**

*The mini USB will power the nVision with or without the battery pack installed.*

*For hazardous location product warnings, refer to the operation manual.*

**DATALOGGING**

Capacity: **Approx. 1,000,000 data points\***

*\*Single Module Recording*

Storage Type: **Non-volatile flash memory**

*Limit of 64 individual recordings.*

Fastest Interval: **10 per second**

*The included CrystalControl software is compatible with Vista (SP 2), Windows 7 (SP 1), Windows 8.1 and Windows 10.*

Slowest Interval: **1 per hour**

*Produces csv, xls, pdf, or signed pdf files, and uses Excel template files (samples included) to automatically format and graph data.*

**ENCLOSURE**

Weight: **680 g (24.0 oz)**

*Weight includes one pressure module, one RTD module, 4AA battery module, and protective boot.*

Rating: **IP66 and IP67**

*Submersible to 1 m for 30 minutes [IEC 60529].*

Housing: **Impact resistant injection molded**

*LCD protected from impact damage by 1.5 mm (0.06") thick polycarbonate lens.*

Keypad and Labels: **UV Resistant Polyester**

Mounting: **M4 x 0.7 [8 mm (0.31")]** deep threaded insert mounting locations

*Skydrol® compatible.*

*For hazardous location product warnings, refer to the operation manual.*

**STORAGE TEMPERATURE**

Temperature Range: **-40 to 75° C (-40 to 167° F)**

*Batteries should be removed if stored for more than one month.*

**SPECIAL FEATURES**

The following requires the use of our free [CrystalControl](#) software

Averaging Screen: **Averages all points in a recording run.**

Data Point Counter: **Screen for counting the data points logged.**

Display Screens: **Turn on and rearrange display screens.**

Estimated Recording Time: **A CrystalControl calculation based on active screens and logging interval.**

Live PC Graph: **During a recording, graph directly to your PC.**

Password Protect: **Changes to configuration or userspan calibration factor(s).**

Pressure Switch Test: **Using a PM and MA20, get deadband and state-change pressure.**

Remove: **Unwanted pressure units.**

Run Tags: **Create and enable run tags that will identify logging runs.**

Screen Numbers: **Number each display screen to make writing procedures around the nVision easier.**

Secure Documents: **Download into secure pdf documents for tamper proof records.**

Start-up Screen: **Define a 32-character prompt which requires user acknowledgement at startup.**

User Defined Unit: **Define and display any pressure units not included, or to use the gauge to display force, level or other pressure related parameters.**

AMETEK offers a variety of solutions for pressure generation and measurement. Our line of products for pressure generation includes everything from small pneumatic hand pumps to a precision, hydraulic pressure comparator capable of generating up to 15 000 psi / 1000 bar / 100 MPa.

All of our pumps may be ordered as part of a Pump System, complete with an nVision and delivered in a sturdy carrying case with custom insert.

\* Refer to the following page for a more detailed description of each pump system.

~ The Waterproof Case is an option for Systems A, B, and C only.  
The Waterproof Case is the only option for Systems G and H.

**► Ordering a Pump System Only**

Any pump system, carrying case, and connection fittings for an nVision reference recorder may be ordered separately from the gauge. Enter NV-NONE followed by the Pump System part number and the Carrying Case option code.
